## ABF Program

---

Offering a full line of ABF products

Cedar River Farms® Natural Beef begins with pure-bred steers born in the U.S. and fed a 100% vegetarian diet. We never use any kind of growth promotant, which includes sub-therapeutic antibiotics, growth hormones, and Beta Agonists. Instead, we rely on genetics, extended days on feed, and a younger harvest age to produce consistently superior beef.

Bell & Evans is a leading producer of chickens raised without antibiotics. For four generations, beginning in the 1890s, Bell & Evans has been raising and processing the highest quality chickens in the heart of Pennsylvania Dutch country, in a modern facility equipped with the latest technology. The birds are raised on an all-vegetarian diet in a low stress environment.

For generations, the Alderfer lineup of products have consisted of only the finest pork, beef and turkey products made from fresh, premium meats. With product line extensions and brandnew product innovation, the quality and selection of our Alderfer brand of products are among the highest in the industry
